Abstract

In listing the authors of the paper, it is necessary to write the full name of the author with the academic title, if any. If all authors are from the same institution, it is necessary to indicate this with an exponent. Only for the corresponding author it is necessary to write the e-mail address with the full address of the institution. Since the journal has an international character, it is necessary to add the addresses with the name of the country.

The abstract should contain an overview of the three main parts of the paper without (sub)titles: the aim of the paper, the main results and the brief conclusion(s). The length of the abstract is a maximum of 250 words. The abstract does not include tables, graphs, figures, references used or literature.

The aim of the paper should be briefly stated, the main results clear and precise, the text of the paper grammatically correct and written in the third person without passive verb forms. The conclusions should be a concise statement of the highlighted results.

Keywords: first, second, third, fourth, fifth

Introduction

The paper should consist of a title, abstract, keywords, introduction, materials and methods, results and discussion, conclusion, bibliography. All tables and graphical appendices should be included in the text (MS Word document).

The length of the paper, including text, tables, graphs, figures and bibliography, should not exceed 10 pages in A-4 format. For longer papers, the author is encouraged to contact Editorial Board in advance. Margins are defined in this template as 3.0 cm left, 2.5 cm top, bottom, and right with 1.15 spacing and double alignment. Left alignment should be used for the title of the paper, chapter titles and subtitles, and list of authors. For the bibliography, use first line spacing (0.5 cm). The pages are not numbered.

The text of the paper will be written in Microsoft Word for Windows version 2003 and higher. Use Times New Roman font, size 12, for writing. Write chapter titles in bold, size 12. Authors' names, first names, and titles are written in the same font, size 12, and institutional addresses are written in size 10. Subheadings are written in small, size 12 italics. For paragraphs in the text, use a space (enter option, size 12): before the subheading, before the title of the tables and after the tables, before the chart / figure and after the title of the chart / figure. The beginning of a paragraph in the text must not be indented with a tab, but should be separated with the Enter key.

It is necessary to use a system of SI units and abbreviations. Other units such as tons (t) and hectares (ha) are also used. The labels or records of the same are: t ha⁻¹, € ha⁻¹, etc.

Abbreviations are written with the addition of the full name the first time they appear in the text (e.g. "polymerase chain reaction (PCR)"). This does not apply to conventional physical, chemical or mathematical abbreviations.

Materials and methods

This part of the paper describes the materials and methods used to conduct the research. Sufficient information must be given so that an experiment can be repeated. For well-known and frequently used methods, a concise description and/or reference is sufficient. New methods should be described in detail (in the case of rarely used chemical products or devices).

It is recommended to write formulas and equations according to the settings in Word. docx (Insert, Equation, Symbol) with a numerical indication in brackets (1) at the end of the line.

Results and discussion

The literature / reference used in the text is cited with the author's last name and year, taking into account the number of authors. If the reference has only one author (surname, yyyy), two authors (surname1 and surname2, yyyy) or more than two authors (surname1 et al., yyyy).

Tables (table width from left to right margin), graphs, and figures (black and white and/or high-resolution color) must be within the text (Table 1). Above the table in the text, the word table, the ordinal number of the table according to the order in the article, and the title are listed. Below the table, the source is given. The contents of the table should be separated by a series of horizontal lines (thickness 0.5). Legends and titles of diagrams, figures and tables should be written bilingually in Croatian and English.

Conclusion

The conclusion is a part of the work where the aim and purpose of the work, the originality and the evaluation of the results (positive and negative) are confirmed. It may also include a proposal for future research on the topic. At the end of the writing, please check if all the requirements of this template and the instructions for authors are followed.

Authors may nominate two to three scientists and/or experts whom they consider competent to review the paper. The decision on the selection of reviewers will be made by Editorial Board.
